

Unit 5: Cluster Analysis

1. Define Cluster Analysis. Explain how it is related to other data mining techniques.
2. What is Clustering? Explain different types of clusterings.
3. With suitable examples, explain different types of clusters.
4. Give Basic K-means algorithm. Explain the same with an example. Also mention its strengths and weaknesses.
5. What is a dendrogram? Give an example.
6. Give Basic Agglomerative Hierarchical Clustering Algorithm.
7. Define graph-based measures of cluster proximity.
8. Explain the concept of core, border, and noise points with the help of suitable examples.
9. State and explain the DBSCAN Algorithm.
10. Distinguish Supervised and Unsupervised cluster evaluation methods.
11. Explain classification-oriented measures of cluster validity.
12. Explain Similarity oriented measures of cluster validity.
