ADVANCED WEB TECHNOLOGIES LAB ASSIGNMENT 8

1. Write a jQuery program to:

Create a <div> element.

Animate the div to move right, increase its size, and reduce opacity on button click.

```
<!DOCTYPE html>
<html>

<head>
  <script src="https://code.jquery.com/jquery-3.7.1.min.js"></script>
</head>

<body>

  <button id="btn">Animate</button>

  <div id="box"></div>

  <script>
    $("#box").css({
      width: "100px",
      height: "100px",
      background: "red",
      position: "relative"
    });

    $("#btn").click(function () {
      $("#box").animate({
        left: "300px",
        width: "150px",
        height: "150px",
        opacity: 0.5
      });
    });
  </script>
```

```
</script>
```

```
</body>
```

```
</html>
```

Output:

2. Write a jQuery program to:

Apply fadeIn, fadeOut, and slideToggle effects on a <div> using different buttons.

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<script src="https://code.jquery.com/jquery-3.7.1.min.js"></script>
```

```
</head>
```

```
<body>
```

```
<button id="in">fadeIn</button>
<button id="out">fadeOut</button>
<button id="slide">slideToggle</button><br><br>

<div id="box"></div>

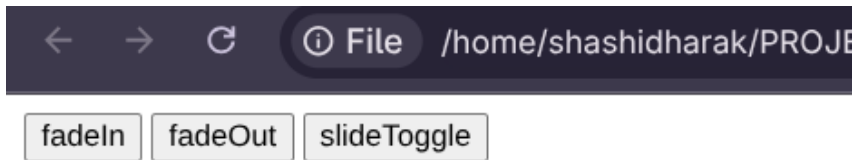

<script>
$("#box").css({
  width:"200px",
  height:"100px",
  background:"blue"
});

$("#in").click(() => $("#box").fadeIn());
$("#out").click(() => $("#box").fadeOut());
$("#slide").click(() => $("#box").slideToggle());
</script>

</body>
</html>
```

Output:

3. Write an AngularJS program to:

Accept two elements using a textbox.

Display the sum of two elements when user clicks on the button. Use Angular JS module and controller to perform the arithmetic operation.

```
<!DOCTYPE html>
<html ng-app="myApp">

<head>
<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">

<input type="number" ng-model="a" placeholder="First Number">
<input type="number" ng-model="b" placeholder="Second Number">

<button ng-click="add()">Add</button>

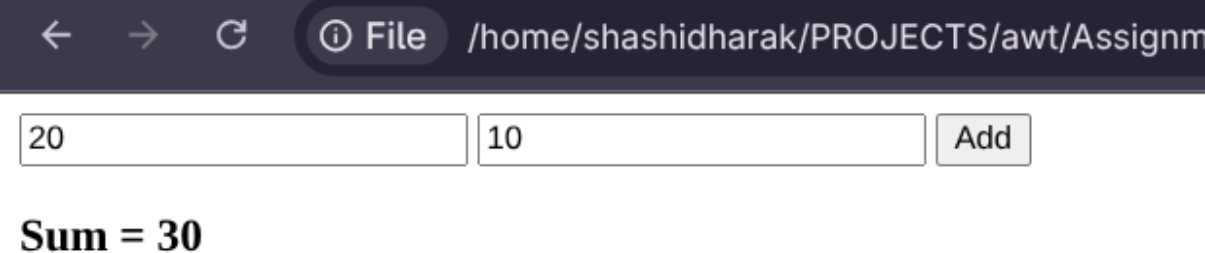

<h3>Sum = {{result}}</h3>

<script>
var app = angular.module("myApp", []);

app.controller("myCtrl", function($scope){
  $scope.add = function(){
    $scope.result = Number($scope.a) + Number($scope.b);
  };
});
</script>
```

```
</body>
</html>
```

Output:

20 10 Add

Sum = 30

4. Write an AngularJS program to:

create a custom filter to change every second character of a string to uppercase.

Example:

Input string : welcome

Output String : wElCoMe

```
<!DOCTYPE html>
<html ng-app="myApp">

<head>
<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">

<input type="text" ng-model="txt" placeholder="Enter text">

<h3>{{ txt | altCaps }}</h3>

<script>
var app = angular.module("myApp", []);

app.controller("myCtrl", function($scope){});

app.filter("altCaps", function(){
  return function(x){
    if(!x) return "";

    let r = "";
    for(let i=0; i<x.length; i++)
      r += (i%2) ? x[i].toUpperCase() : x[i];
```

```

    return r;
  };
});
</script>

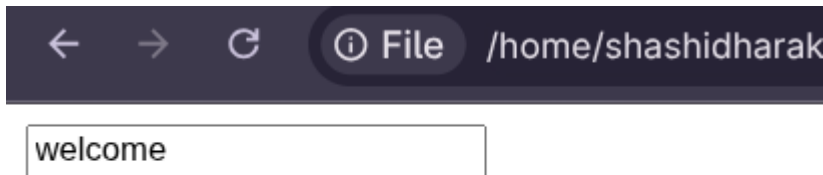

```

```

</body>
</html>

```

Output:

wElCoMe

5. Write an Angular JS program to find the sum of 6 subjects inputted using the textboxes. Use Angular JS module and controller to perform the required operation.

```

<!DOCTYPE html>
<html ng-app="myApp">

<head>
<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">

<input type="number" ng-model="s1" placeholder="Subject 1"><br>
<input type="number" ng-model="s2" placeholder="Subject 2"><br>
<input type="number" ng-model="s3" placeholder="Subject 3"><br>
<input type="number" ng-model="s4" placeholder="Subject 4"><br>
<input type="number" ng-model="s5" placeholder="Subject 5"><br>
<input type="number" ng-model="s6" placeholder="Subject 6"><br><br>

<button ng-click="sum()">Calculate</button>

<h3>Total = {{total}}</h3>

<script>
var app = angular.module("myApp", []);

app.controller("myCtrl", function($scope){
  $scope.sum = function(){
    $scope.total =

```

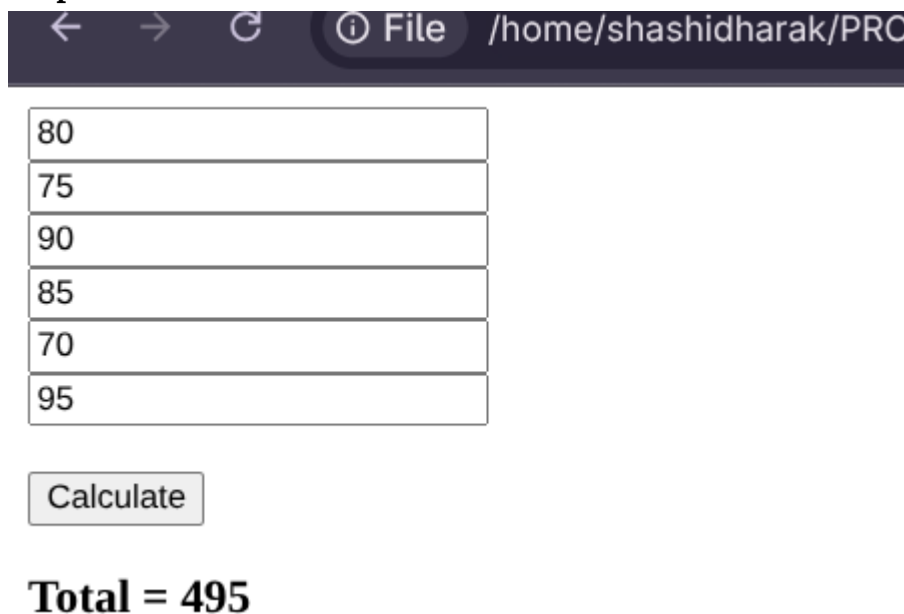

```

        Number($scope.s1||0) +
        Number($scope.s2||0) +
        Number($scope.s3||0) +
        Number($scope.s4||0) +
        Number($scope.s5||0) +
        Number($scope.s6||0);
    };
});
</script>

</body>
</html>

```

Output:

80
75
90
85
70
95

Calculate

Total = 495

6. Design and develop an AJAX-based web application to fetch and display user details from a server without reloading the page. Use JSON format for data exchange.

users.json:

```

{
  "name": "Vikas",
  "age": 22,
  "city": "Davangere"
}

```

index.html:

```

<!DOCTYPE html>
<html>

<body>

```

```
<button onclick="loadData()">Get User</button>

<p id="out"></p>

<script>
function loadData() {
    let x = new XMLHttpRequest();

    x.onreadystatechange = function () {
        if (this.readyState == 4 && this.status == 200) {
            let u = JSON.parse(this.responseText);

            out.innerHTML =
                "Name: " + u.name + "<br>" +
                "Age: " + u.age + "<br>" +
                "City: " + u.city;
        }
    };

    x.open("GET", "users.json", true);
    x.send();
}
</script>

</body>

</html>
```

Output:

Get User

Name: Vikas
Age: 22
City: Davangere
