

Assignment-5

1. Use Salary Dataset – Simple linear regression from kaggle and apply simple linear regression and plot the regression line . Find the error and also predict the salary for given experience details.
2. Apply multi linear regression and plot the regression line . Find the error and also predict the disease occurrence for the new input details.Use heart data .csv
3. Apply K-means clustering on the following data.
 $x = [4, 5, 10, 4, 3, 11, 14, 6, 10, 12]$
 $y = [21, 19, 24, 17, 16, 25, 24, 22, 21, 21]$
4. Perform Hierarchical Clustering on
 - a. all __Customers__data.csv and draw the dendogram.
 - b. On the data points $[18, 22, 25, 27, 42, 43]$ and draw the dendogram.
5. Implement Polinomial regression on Data1.csv. Display the coefficients.
6. Apply logistic regression on the following dataset predict the result for study hour 30. Display the regression coefficients .

Hours Study	Pass (1) / Fail (0)
29	0
15	0
33	1
28	1
39	1
