Cloud Computing and Big data Analytics

Assignment 2

1. What is Hadoop? Explain Hadoop core components in detail.
2. With a diagram, explain Hadoop 2 YARN Architecture.
3. Describe the deployment models of cloud computing.
4. Discuss the file write operation in Hadoop.
5. How does the MapReduce process function in distributed computing? Explain with example.
6. Explain the benefits of public cloud. Describe the need of cloud service models.
7. Discuss the fundamental differences between cloud computing and distributed computing.
8. Explore the key features of Platform as a Service (PaaS) model.
9. List the steps involved in the anatomy of file read and file write in Hadoop.
10. Explain different HDFS daemons.
11. Explain private cloud computing building blocks with neat diagram.
12. Describe the network level security issues in cloud computing.
13. Describe the key benefits offered by multi-cloud in comparison to management of individual clouds.
