

Problem Statements

1. Student Management System

Design and develop a Java application to manage student details such as registration, marks, and attendance using Object Oriented Programming concepts, exception handling, GUI, and database connectivity.

2. Library Management System

Develop a Java-based system to manage book records, issue/return operations, and member details with proper exception handling and database support.

3. Online Quiz Application

Create a Java GUI application that allows users to attempt quizzes, evaluates answers automatically, and stores results in a database.

4. Bank Account Management System

Implement a Java application that simulates basic banking operations like account creation, deposit, withdrawal, and balance enquiry using OOP and multithreading.

5. Employee Payroll System

Develop a Java application to calculate employee salaries based on designation, working hours, and deductions using OOP concepts and JDBC.

6. Hotel Room Booking System

Design a Java GUI application to book hotel rooms, check availability, and calculate billing with proper exception handling and database integration.

7. Inventory Management System

Create a Java application to manage product stock, update quantities, and generate inventory reports using database connectivity.

8. Online Voting System

Develop a secure Java application that allows users to cast votes, prevents duplicate voting, and displays election results using JDBC.

9. Chat Application using Sockets

Implement a client-server chat application in Java using socket programming and multithreading for real-time communication.

10. Multi-User Chat Server

Develop a Java-based chat server that supports multiple clients simultaneously using multithreading and networking concepts.

11. File Transfer Application

Create a Java application that allows file transfer between client and server using socket programming with proper exception handling.

12. Online Examination System

Design a Java GUI application for conducting online exams, evaluating answers automatically, and storing results in a database.

13. ATM Simulation System

Develop a Java program that simulates ATM operations such as login, cash withdrawal, balance enquiry, and mini statement using OOP and exception handling.

14. Bus Reservation System

Create a Java application to manage bus schedules, seat booking, and passenger details using GUI and database connectivity.

15. Hospital Management System

Design a Java-based system to manage patient records, doctor details, appointments, and billing using JDBC and GUI components.

16. Online Shopping Cart Application

Develop a Java application that allows users to add products to a cart, calculate total cost, and place orders using OOP and database concepts.

17. Currency Converter Application

Create a Java GUI application that converts currency values based on predefined rates with proper validation and exception handling.

18. Online Feedback System

Develop a Java application that allows users to submit feedback and stores responses securely in a backend database.

19. Multithreaded Download Manager

Implement a Java application that downloads files using multiple threads to improve performance and handle interruptions gracefully.

20. Client-Server Calculator Application

Create a Java client-server application where the client sends arithmetic requests and the server processes and returns results using socket programming.

21. Java Address Book Application

Design a Java GUI application to store, update, search, and delete contact details using JDBC.

22. Web-Based Student Registration System

Develop a web application using Java Servlets/JSP that allows students to register online and stores data in a backend database.
