

UNIT-1

2m

- 1.How to determine the data type of a variable ? Give the syntax and example.
- 2.What is indentation ? Why it is required ?
- 3.What is python virtual machine?
- 4.What is keyword argument? Give Example
5. How to determine the data type of a variable ? Give the syntax and example.
6. What is indentation ? Why it is required?

5m

- 1.Explain any four features of Python.
- 2.Explain use of string.format and f-string with print() function.
- 3.Explain various data types in Python.
- 4 Explain any four flavors of Python.
5. Explain 'while' and 'for' loops with syntax and example.
- 6.Explain Exception handling in Python with try...except... finally block.
7. How to read different types of input from the keyboard ? Give examples.
8. With example explain keyword arguments and default arguments to the function.
9. With example explain how command line arguments are passed to python program.
10. Give the syntax of range function. Explain with example.
11. With syntax and example explain how to define and call a function in Python.

UNIT-2

2m

- 1.Why strings are called immutable ?
- 2.What is tuple ? How it is created in python ?
- 3.What is dictionary ? Give example.
4. What is the use of negative indexing ? Give example.

5m

- 1.What is string slicing ? Explain with examples'
2. Explain split and join methods of string with example.
- 3.Explain any five dictionary methods with syntax and example

4. Explain concatenation, repetition and membership operations on string'
5. Write a note on indexing and slicing of lists
6. Explain any four set methods.
7. With example explain how to Access and Modify key:value Pairs in Dictionaries.
8. Explain any four list methods with syntax.
9. Write a Python code to implement stack operations using lists.
10. Explain concatenation and repetition operations on string with example
- 11.. Explain split and join methods of list with example.
12. Write a note on indexing and slicing operations on tuples.

UNIT-3

2m

1. How to define private instance variable and methods in Python ?
2. What is Canvas ? How it is created in Python ?
3. What is the use of seek() and tell() methods ?
4. What is root window ? How it is created in Python ?

5m

1. List and explain various file opening modes with examples.
2. What is inheritance ? How to implement inheritance in Python ? Give an example.
3. Explain declaring a class, defining an object and constructor with syntax and example.
4. Explain multi-level inheritance with example'
5. Explain method overloading and overriding with example.
6. Write a note on : i) Text Widget ii) Entry Widget.
7. With example explain how 'with' statement is used to open and close files.
8. How to create a button widget and bind it to the event handler ? Explain with example
9. With example explain any two methods to read data from the file.
10. Explain multipath inheritance with example.
11. Explain the process of creating a Listbox widget with a suitable example. Also, explain different values associated with selectmode option.
12. Write a note on arranging Widgets in a frame using layout managers with example

UNIT-4

2m

1. List any two file object attributes and mention its purpose.
2. What is root window ? How it is created in Python ?
3. How to connect to the SQLite database ? Give example.
4. What is Padas Series ? Give example.
5. What is matplotlib and pyplot ?

5m

1. Explain any four sqlite database operations with example.
2. Explain any five NumPy array attributes with syntax.
3. Explain Bar Graph creation using Matplot Library module.
4. Explain basic arithmetic operations on NumPy array with examples'
5. Explain any four operations on dataframe with example.
6. Write a program to display histogram
7. Explain four SQLite module methods required to use SQLite database.
8. Explain any four string processing methods supported by Pandas Library with example.
9. Write a Python program to demonstrate any four SQLite Database operations.
10. Explain any four NumPy array creation functions with example.
11. Explain with example any two methods of creating Data Frame.
