Assignment-2 MERN Lab

1. Write a React program to display Hello World using jsx.

```
<!DOCTYPE html>
<html lang="en">

<head>
  <title>React App</title>

  <script src="https://unpkg.com/react@16/umd/react.development.js"></script>
  <script
src="https://unpkg.com/react-dom@16/umd/react-dom.development.js"></script>
  <script src="https://unpkg.com/@babel/standalone/babel.min.js"></script>
</head>

<body>

  <div id="content"></div>
  <script type="text/babel">
    const element = (
      <div>
        <h1>Hello World</h1>
      </div>
    );

    ReactDOM.render(
      element,
      document.getElementById("content")
    );
  </script>

</body>

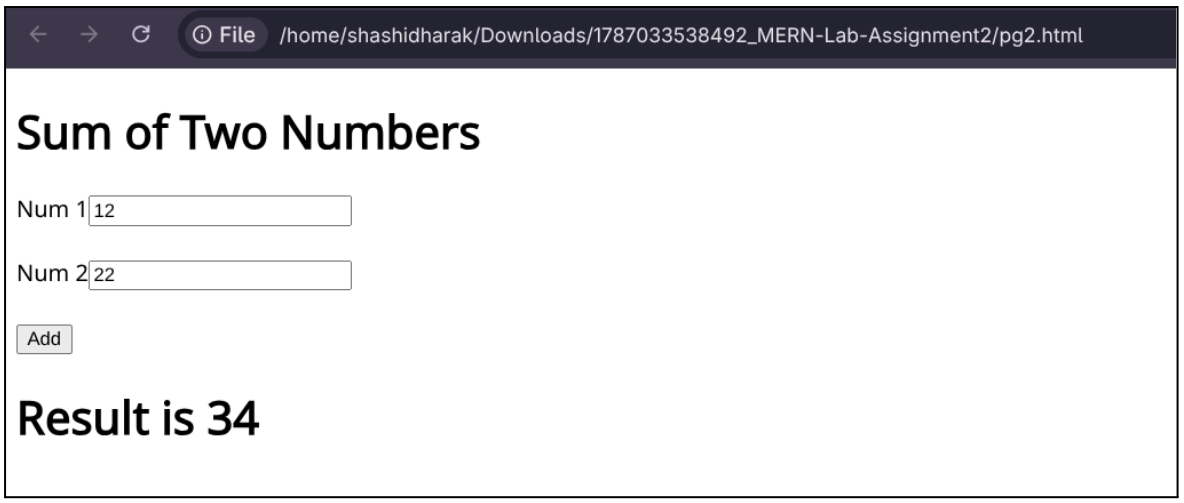

</html>
```

2. Write a React program to accept 2 number and display sum using jsx.

```
<!DOCTYPE html>
<html>
<head>
```

```
  <title>Sum of 2</title>
  <script src="https://unpkg.com/react@16/umd/react.development.js"></script>
  <script
src="https://unpkg.com/react-dom@16/umd/react-dom.development.js"></script>
  <script src="https://unpkg.com/@babel/standalone@7/babel.min.js"></script>
</head>
<body>
  <div id="content"></div>
  <script type="text/babel">
    const element = (
      <div>
        <h1>Sum of Two Numbers</h1>
        <label>Num 1</label>
        <input type="number" id="n1" />
        <br /><br />
        <label>Num 2</label>
        <input type="number" id="n2" />
        <br /><br />
        <button onClick={myfunction}>Add</button>
        <div id="myresult"></div>
      </div>
    );
    ReactDOM.render(
      element,
      document.getElementById('content')
    );
    function myfunction() {
      let a = Number(document.getElementById('n1').value);
      let b = Number(document.getElementById('n2').value);
      let sum = a + b;
      const result = (
        <h1>Result is {sum}</h1>
      );
      ReactDOM.render(
        result,
        document.getElementById('myresult')
      );
    }
  </script>
</body>
</html>
```

3. Write a React program to accept username and age and display in div using jsx.

```
<!DOCTYPE html>
<html>
<head>
  <title>User Details</title>

  <script src="https://unpkg.com/react@16/umd/react.development.js"></script>
  <script
src="https://unpkg.com/react-dom@16/umd/react-dom.development.js"></script>
  <script src="https://unpkg.com/@babel/standalone@7/babel.min.js"></script>
</head>

<body>

  <div id="content"></div>

  <script type="text/babel">

    function myfunction() {
      let username = document.getElementById('username').value;
      let age = document.getElementById('age').value;

      const result = (
        <div>
          <h2>Username: {username}</h2>
          <h2>Age: {age}</h2>
        </div>
      );

      ReactDOM.render(
        result,
```

```
        document.getElementById('myresult')
      );
    }

    const element = (
      <div>
        <h1>User Details</h1>

        <label>Username</label>
        <input type="text" id="username" />

        <br /><br />

        <label>Age</label>
        <input type="number" id="age" />

        <br /><br />

        <button onClick={myfunction}>Submit</button>

        <div id="myresult"></div>
      </div>
    );

    ReactDOM.render(
      element,
      document.getElementById('content')
    );

  </script>

</body>
</html>
```

4. Write a React js program to accept the number and display the result, use CSS to style Headings, Input fields , Buttons and Result.

```
<!DOCTYPE html>
<html>

<head>
  <title>Number Result</title>

  <script src="https://unpkg.com/react@16/umd/react.development.js"></script>
  <script
src="https://unpkg.com/react-dom@16/umd/react-dom.development.js"></script>
  <script src="https://unpkg.com/@babel/standalone@7/babel.min.js"></script>

  <style>
    h1 {
      color: blue;
    }

    input {
      padding: 10px;
      border: 2px solid gray;
      border-radius: 5px;
    }

    button {
      padding: 10px 20px;
      background: blue;
      color: white;
      border: 0;
      border-radius: 5px;
    }

    .result {
      margin-top: 20px;
      padding: 15px;
      background: lightblue;
    }
  </style>
</head>

<body>

  <div id="content"></div>

  <script type="text/babel">

    function myfunction() {
```

```
        let number = document.getElementById('number').value;

        const result = (
          <div className="result">
            <h2>Result: {number}</h2>
          </div>
        );

        ReactDOM.render(result, document.getElementById('myresult'));
      }

      const element = (
        <div>

          <h1>Accept a Number</h1>

          <label>Enter Number: </label>
          <input type="number" id="number" />

          <br /><br />

          <button onClick={myfunction}>
            Submit
          </button>

          <div id="myresult"></div>

        </div>
      );

      ReactDOM.render(
        element,
        document.getElementById('content')
      );

    </script>

</body>

</html>
```

5. Write a JSX program to create and display Student profile webpage containing the student name, USN, Course, Semester and Email, Use CSS styling to the Webpage.

```
<!DOCTYPE html>
<html>

<head>
  <title>Student Profile</title>

  <script src="https://unpkg.com/react@16/umd/react.development.js"></script>
  <script
src="https://unpkg.com/react-dom@16/umd/react-dom.development.js"></script>
  <script src="https://unpkg.com/@babel/standalone@7/babel.min.js"></script>

  <style>
    body {
      font-family: Arial;
      background: lightgray;
    }

    .container {
      width: 400px;
      margin: 50px auto;
      padding: 20px;
      background: white;
      border-radius: 10px;
    }

    h1 {
      color: blue;
      text-align: center;
```

```
    }

    label {
      display: block;
      margin-top: 10px;
    }

    input {
      width: 95%;
      padding: 8px;
    }

    button {
      margin-top: 15px;
      padding: 10px 20px;
      background: blue;
      color: white;
      border: 0;
      border-radius: 5px;
    }

    #res {
      margin-top: 20px;
      padding: 10px;
      background: lightblue;
    }
  </style>
</head>

<body>

  <div id="contents"></div>

  <script type="text/babel">

    function displayProfile() {

      let name = document.getElementById('name').value;
      let usn = document.getElementById('usn').value;
      let course = document.getElementById('course').value;
      let semester = document.getElementById('semester').value;
      let email = document.getElementById('email').value;

      let result = `
        <h2>Student Profile</h2>
        <p><b>Name:</b> ${name}</p>
        <p><b>USN:</b> ${usn}</p>
        <p><b>Course:</b> ${course}</p>
```

```
            <p><b>Semester:</b> ${semester}</p>
            <p><b>Email:</b> ${email}</p>
          `;

          document.getElementById('res').innerHTML = result;
        }

        const element = (
          <div className="container">

            <h1>Student Profile</h1>

            <label>Name</label>
            <input type="text" id="name" />

            <label>USN</label>
            <input type="text" id="usn" />

            <label>Course</label>
            <input type="text" id="course" />

            <label>Semester</label>
            <input type="text" id="semester" />

            <label>Email</label>
            <input type="email" id="email" />

            <br />

            <button onClick={displayProfile}>
              Display Profile
            </button>

            <div id="res"></div>

          </div>
        );

        ReactDOM.render(
          element,
          document.getElementById('contents')
        );

      </script>

    </body>

    </html>
