#### **VI SEMESTER BCA**

#### **PHP and MYSQL**

# **VI SEMESTER BCA**

## **PHP and MYSQL**

### **Question Bank**

#### **UNIT I**

##### **Two Mark Questions**

1. What does PHP stand for? Give PHP code to display “Hello World”
2. List any four features of PHP
3. Expand PEAR? What it is?
4. How do you include PHP code in an HTML file? Give example
5. How to use white spaces in PHP ? Give example
6. List steps to install and Configure PHP in windows
7. What is lexical structure?
8. What is Constants in php ,Give example?
9. What are different ways of Writing comments in PHP ? Give example.
10. What is the purpose of the echo statement in PHP? Give example
11. What are the main data types supported by PHP?
12. What are resource data type in PHP ?
13. Explain the function used to test whether a value is a resource in php? Give example?
14. What are call backs? Give example?
15. What is the purpose of phpinfo()?
16. What is variable reference? Give example
17. What is static and global scope of variable in PHP ?
18. What is operator associativity? give example?
19. What are auto increment and auto decrement Operators in PHP? Give example
20. How do you declare and initialize a variable in PHP?
21. What is type juggling in php? write the rules for type juggling in php?
22. What is the difference between == and === in PHP?
23. What is the difference between binary, and ternary operators?
24. What do you mean by Casting Operators? List any two
25. How do you define a constant in PHP? Give example
26. What is the use of Backtick operator? give example?
27. What is use of execution Operator? Give example

##### **Long Answer Questions**

1. List and explain any four key features of PHP
2. Explain brief history of php 2.0 along with its feature list?

3. Explain how to install and configure PHP in windows
4. Explain How Embedding PHP code within HTML
5. Explain how to Sending Data to Web browser with code example
6. Explain various scalar data types in PHP with example
7. Explain Compound and special data types in PHP with example
8. Write a note on scope of variables in PHP with examples
9. Write a note on Garbage collection in PHP.
10. Explain any two categories of Operators with example
11. Write a note on various casting operators.
12. Explain Miscellaneous operators with example?

## UNIT II

### Two Mark Questions

1. Give the syntax and example of switch statement in PHP.
2. What is the ternary operator (?:) in PHP, and how is it used?
3. Explain the syntax and example of a for loop in PHP.
4. How do you skip an iteration in a loop using continue in PHP? Give example
5. How do you create an array in PHP? Give example
6. Explain how to access elements in an array in PHP.
7. What are the types of arrays in PHP, and how do they differ from each other?
8. Define indexed arrays and associative arrays in PHP.
9. What is role of the foreach loop in PHP when working with arrays.? Give example
10. What is the difference between a numeric index and a string index in PHP arrays?
11. What is a multidimensional array, and how is it structured in PHP?
12. How do you manipulate arrays in PHP, such as adding or removing elements?
13. What are array functions in PHP, and why are they useful?
14. What is the purpose of the shuffle() function in PHP arrays? Give example
15. What is the purpose of the explode() function in PHP arrays? Give example
16. What is the purpose of the extract() function in PHP arrays? Give example
17. What is the purpose of the compact() function in PHP arrays? Give example
18. Explain the use of reset() and end() function in php with example?
19. Explain the purpose of including files in PHP using include() and require().
20. Differentiate between include() and require() in PHP.
21. What is implicit casting in PHP, and when does it occur?
22. Explain the concept of explicit casting in PHP, providing an example.

### Long Answer Questions

1. Explain switch() and for() statements with syntax and example
2. Explain while and do..while loops in PHP with example
3. Explain any two types of arrays in PHP with example for each.
4. Explain the process of creating and manipulating indexed arrays in PHP with example.
5. Describe the process of creating and manipulating associative arrays in PHP with example.

6. Explain the process of iterating over a multidimensional array using nested loops in PHP with example
7. Explain any four array functions in PHP with example
8. Explain Extract() and Compact() functions with example
9. Compare and contrast the include() and require() functions in PHP for file inclusion with example.
10. Write a note on implicit and explicit casting in PHP
11. Write a PHP program checks whether the given number is an Armstrong number or not.

## UNIT III

### Two Mark Questions

1. Give the syntax and example for defining a user-defined function in PHP.
2. Differentiate between formal parameters and actual parameters in PHP functions.
3. What is function scope in PHP?
4. What happens if you call a PHP function with fewer arguments than declared in its definition?
5. Describe the concept of default parameter values in PHP functions.
6. How do you access global variables within a PHP function? Give example
7. What is "pass by value" in the context of PHP function parameters.
8. What is "pass by reference" in PHP function parameters?
9. What is Default Parameter in PHP functions? Give example
10. How to check missing parameters in PHP functions ? Give example
11. What are anonymous functions ? Give examples
12. Differentiate single quoted and double quoted strings in PHP
13. What is variable interpolation? Give example
14. Explain the two ways to interpolate variables into strings?
15. What are Here Documents in PHP? Give example
16. Differentiate echo and print statements in PHP
17. What is use of print\_r() statement ? Give example
18. What is type specifiers? list the printf type specifiers?
19. What is use of var\_dump() statement ? Give example
20. Explain trim function in php along with its types?
21. How can you include one PHP file into another PHP file?
22. Name three commonly used PHP string manipulation functions.
23. Explain strcasecmp() with example?
24. Differentiate strcmp() and strcasecmp() in php?
25. Write the syntax of substr\_count() PHP with example
26. Write the syntax of substr\_replace() PHP with example
27. What is the purpose of the **substr()** function in PHP? Give example
28. How can you concatenate strings in PHP? Give example
29. List two PHP library function for handling date and time.
30. How do you create an instance of a class in PHP? Give example
31. How you access object properties in PHP ? Give example

32. Define overloading in the context of PHP classes.
33. What is a constructor in PHP classes? How it is declared ?
34. What is a destructor in PHP classes? How it is declared?
35. How do you access object properties and methods within a class in PHP? Give example
36. What is a trait in PHP, and how does it differ from classes and interfaces?
37. What is introspection in PHP ?

### **Long Answer Questions**

1. Explain the steps involved in defining and invoking a user-defined function in PHP. Provide a code example to illustrate.
2. Explain the concept of variable scope in PHP functions. Explain the difference between local, global, and static variables within the context of functions. Provide examples to illustrate each type.
3. Explain date and time manipulation functions in PHP's standard library. Provide example for each.
4. Explain Passing parameter by value and by reference with respect to PHP functions. Give example for each.
5. Explain type hinting in php with example ?
6. Write a note on
  - i) Variable functions
  - ii) Function with default argument
  - iii) Function with variable argument
7. Write a note on anonymous functions in PHP
8. Describe how strings are declared and initialized in PHP. Explain the difference between single quotes (") and double quotes (""") in string declaration with example
9. Write note on string here document declarations
10. Explain print\_r() and var\_dump() functions in PHP with example
11. Explain any four string functions in PHP with example
12. Explain miscellaneous string functions in PHP with examples
13. Explain the functions used in PHP to test whether two Strings are approximately equal
14. Explain explode() and strtok() functions with respect to PHP strings
15. Explain the process of creating a class and instantiating objects in PHP with code example
16. Explain the concept of inheritance in PHP classes with example
17. Explain the role of access modifiers in PHP classes, such as public, private, and protected.
18. Explain the process of implementing an interface in PHP with code example
19. Explain how traits are used in PHP classes with example program
20. Explain conflict resolution during multiple trait usage in PHP class with code example

## **UNIT IV**

### **Two Mark Questions**

1. What is the role of HTML form in web development.
2. What is use of Action attribute in HTML form? Give example
3. Name two methods for handling HTML form data in PHP.

4. Differentiate between the POST and GET methods in HTML forms.
5. What are the limitations of using the GET method for transferring form data.
6. What security considerations should be taken when handling form data in PHP?
7. What is the purpose and functionality of `$_SERVER['REQUEST_METHOD']` in PHP when dealing with form submissions.
8. What is MySQL and how is it used in web development?
9. List any four data types in MySQL.
10. Differentiate char and varchar data types.
11. What is the purpose of an auto-increment field in a database table? Provide example of auto increment field creation.
12. What is the MySQL client and what role does it play in database management?
13. Differentiate between MySQL client and phpMyAdmin for accessing MySQL.
14. List four common MySQL commands used for database management.
15. How do you establish a connection to a MySQL database using PHP?
16. What is purpose of `mysqli_query()` method ? Give usage example
17. Differentiate `mysqli_num_rows()` and `mysqli_affected_rows()` methods
18. How do you execute simple queries in MySQL using PHP? Give example
19. What function is used to retrieve query results in PHP from a MySQL database?
20. How do you count the number of records returned by a MySQL query in PHP? Give code example.
21. How to update records in a MySQL database using PHP. Give code example
22. Give PHP code for validating email
23. List `mysqli_fetch_array()` constants in PHP

### Long Answer Questions

1. Explain the role of HTML forms in web development and discuss two methods for handling form data in PHP. Provide examples to illustrate their usage.
  2. Explain any Five HTML form input types with usage syntax.
  3. Differentiate between the POST and GET methods in HTML forms. Give code examples to illustrate both methods.
  4. Explain the key terms used in database management systems, highlighting the significance of concepts such as tables, rows, columns, and primary keys
  5. Explain any five data types in MySQL, including numeric, string, date/time, and Boolean data types, and provide examples of their usage
  6. Differentiate between accessing MySQL using the MySQL client and using phpMyAdmin. Explain the advantages and disadvantages of each approach.
  7. Outline the essential MySQL commands necessary for database management, including creating databases, tables, inserting data, querying data, and updating records.
  8. Explain the process of connecting to MySQL using PHP . Give the PHP code for connecting and Selecting Specific database.
  9. Explain the process of executing simple queries in MySQL using PHP. Provide a code example demonstrating how to execute a SELECT query and retrieve the results using PHP MySQL functions.
  10. Explain the process of updating records in a MySQL database
  11. Explain the process of retrieving query results in PHP after executing a SELECT statement in MySQL with code example.
